## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on March 22, 2006 has been entered.

The Examiner acknowledges the cancellation of claim 6. Claims 1-5 are pending.

### ***Information Disclosure Statement***

2. The Non Patent Literature Document authored by Cagir et al. entitled "Limb Surface Mechanical Indentation in the Presence of Accumulated Soft Tissue Fluid" cited in the Information Disclosure Statement filed March 22, 2006 fails to comply with the provisions of 37 CFR 1.97, 1.98 and MPEP § 609 because the publication date of the document is not provided. It has been placed in the application file, but the information referred to therein has not been considered as to the merits. Applicant is advised that the date of any re-submission of any item of information contained in this information disclosure statement or the submission of any missing element(s) will be the date of submission for purposes of determining compliance with the requirements based on the time of filing the statement, including all certification requirements for statements under 37 CFR 1.97(e). See MPEP § 609.05(a).

*Allowable Subject Matter*

3. Claims 1-5 are allowed over the prior art of record.
4. The following is an examiner's statement of reasons for allowance:

Regarding claims 1 and 2, no prior art of record teach or fairly suggest an applicator instrument for use in noninvasively evaluating a limb, where the instrument includes a base portion, a force plate, a solid force probe extending through an aperture of the force plate, at least one stabilizing column on the force plate which is slidably received within the base portion, an encoder positioned within the base portion for measuring the travel distance of the stabilizing column, and a load cell directly connected to the force probe for use in measuring the pressure applied to the force probe, where the force plate is permitted to slide relative to the probe and the measured travel distance and pressure measurements are used to compute modulus of hardness.

Regarding claims 3-5, no prior art of record teach or fairly suggest an applicator instrument for use in noninvasively evaluating a limb, where the instrument includes a force plate, a solid force probe extending through an aperture of the force plate, an encoder positioned *within* the instrument for measuring the relative distance between the distal end of the force plate and the distal end of the force probe, and a load cell directly interconnected to the force probe for use in measuring the pressure applied to the force probe, where the force plate is permitted to slide relative to the probe and the measured travel distance and pressure measurements are used to compute modulus of hardness.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
